PERFORMANCE

*Dreams
about slimming*

A woman with dark hair and a bright smile is lying on a grey padded treatment table. A medical professional in a pink uniform and blue gloves is performing a procedure on her lower abdomen. The professional is holding a device with a bright blue circular light on its end, which is being applied to the skin. The woman is covered with a white and grey patterned blanket. The background is a clinical-looking room with a white door and a red fire extinguisher. The overall lighting is dramatic, with strong highlights and shadows.

Thermal Shock is an effective treatment for individuals who are looking to target fat pockets resistant to diet and exercise, tighten loose skin and reduce marks of aging.

Technology for beauty

Thermal Shock is a modern, non-surgical procedure used to reduce localized fat with no damage to the skin or other surrounding tissues. Thermal Shock applies intervals of heating and cooling to the targeted areas of body fat, facilitating an extremely effective process of fat loss.

Cooling Phase – Cooling causes the fat cells to crystallize which as a consequence break down in the process and are naturally removed from the body.

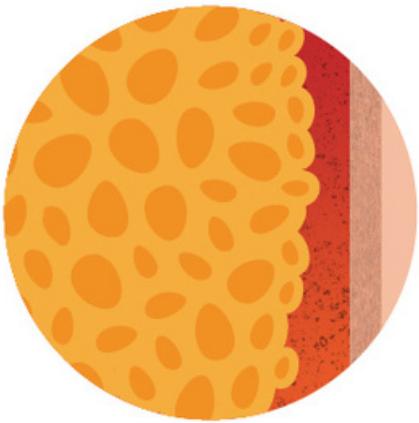

Heating phase – Now crystallized fat cells move into deeper layers of the fat tissue, further cooling down other fat cells. The metabolism accelerated by cell heating facilitates the complete removal of crystallized fat.

The process

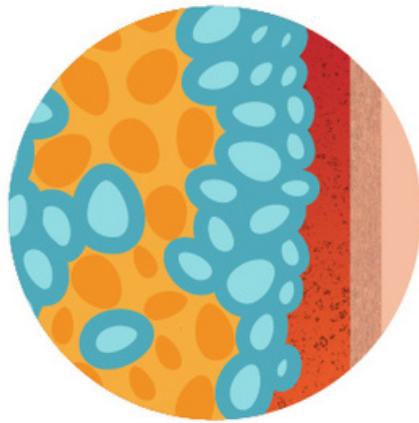

BEFORE

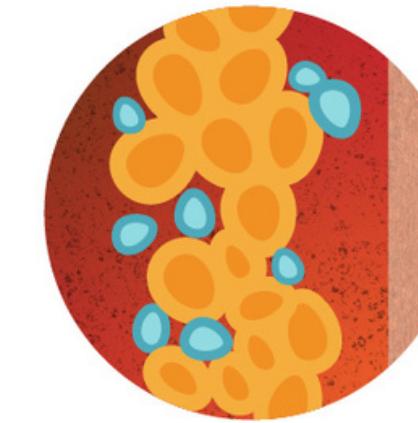

1 Unwanted fat tissue resistant to diet and exercise in places such as torso, arms, chest and thighs

2 Alternating low temperatures and cycles of heating causes the lipids in the fat cells to crystallize more easily

3 Unnecessary cells are expelled from the body in natural processes

4 Remaining fat cells condense, reducing the fat layer

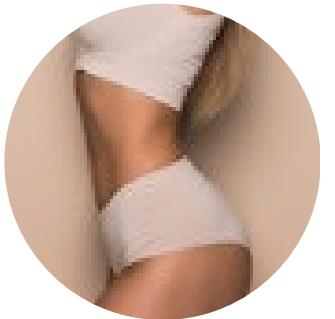

AFTER

See what you
can achieve

Customers who try thermal shock therapy experience significant results achieved after only a few treatments with no recovery or downtime needed

°CRYO protocols

Contouring

a program suitable for the permanent elimination of excess body fat from places that are particularly resistant to weight loss; it allows to achieve a slim figure

Facelift

a program allowing to obtain facelifting effects, i.e. firming and toning the skin, as well as reducing the double chin

Firming

a program designed for areas of the body which require more attention to help with tightening loose skin and stimulating collagen production

Toning

a program designed to significantly even out skin tone and improve the skin's texture, firmness and elasticity by fighting cellulite and reducing stretch marks

Anti-aging

a program triggering anti-aging processes smoothing out wrinkles due to increased production of collagen and hyaluronic acid, allowing the skin to retain more moisture

Recovery

a program suitable for regeneration or sport rehabilitation of a given body part after an injury

Anti-winkle effect

After 2 treatment

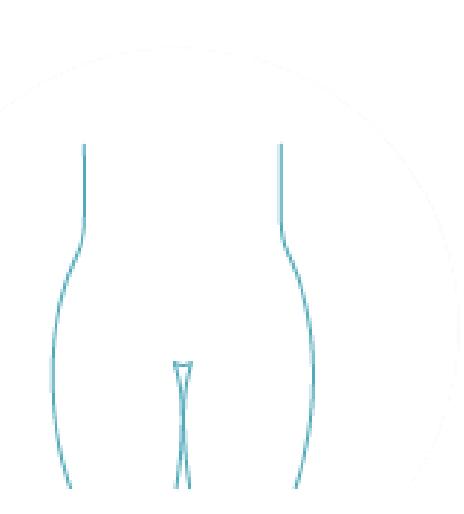

The beauty of science

In a recent clinical trial, 21 subjects completed treatments over the course of 90 days and ended with impressive results:

fat-layer reduction in the abdomen

fat-layer reduction in the flanks

21.6%
mean reduction

up to 50.1%
reductions from the baseline
to 90 days after the
treatment

14.5%
mean reduction

up to 43.2%
reductions from the baseline
to 90 days after the
treatment

The ergonomic handle allows for smooth and easy application for operators during longer treatment protocols

A LED light ring changes colors indicating the treatment phase, and is also customizable depending on customer preferences

A woman is lying on a massage table, smiling and looking relaxed. A massage therapist in a maroon uniform is performing a treatment on her back. The therapist is holding a circular device with a glowing blue ring and a central point, which is being used on the woman's skin. The background is dark, suggesting a spa or treatment room environment.

The peltier module delivers effective thermal shock treatment, efficiently switching between warm and cold applications.

The built in thermocouple sensor informs the operator of the exact temperature being applied during the treatment

°CRYO Wave

PERFORMANCE

A revolutionary solution to spa and wellness centers across the globe. The therapy is proven to be extremely effective, delivering proven results.

Easy to use

Ergonomic design, intuitive system operations

Safest device

Built-in thermocouple sensor indicating accurate treatment temperatures

Manufactured for high volume use

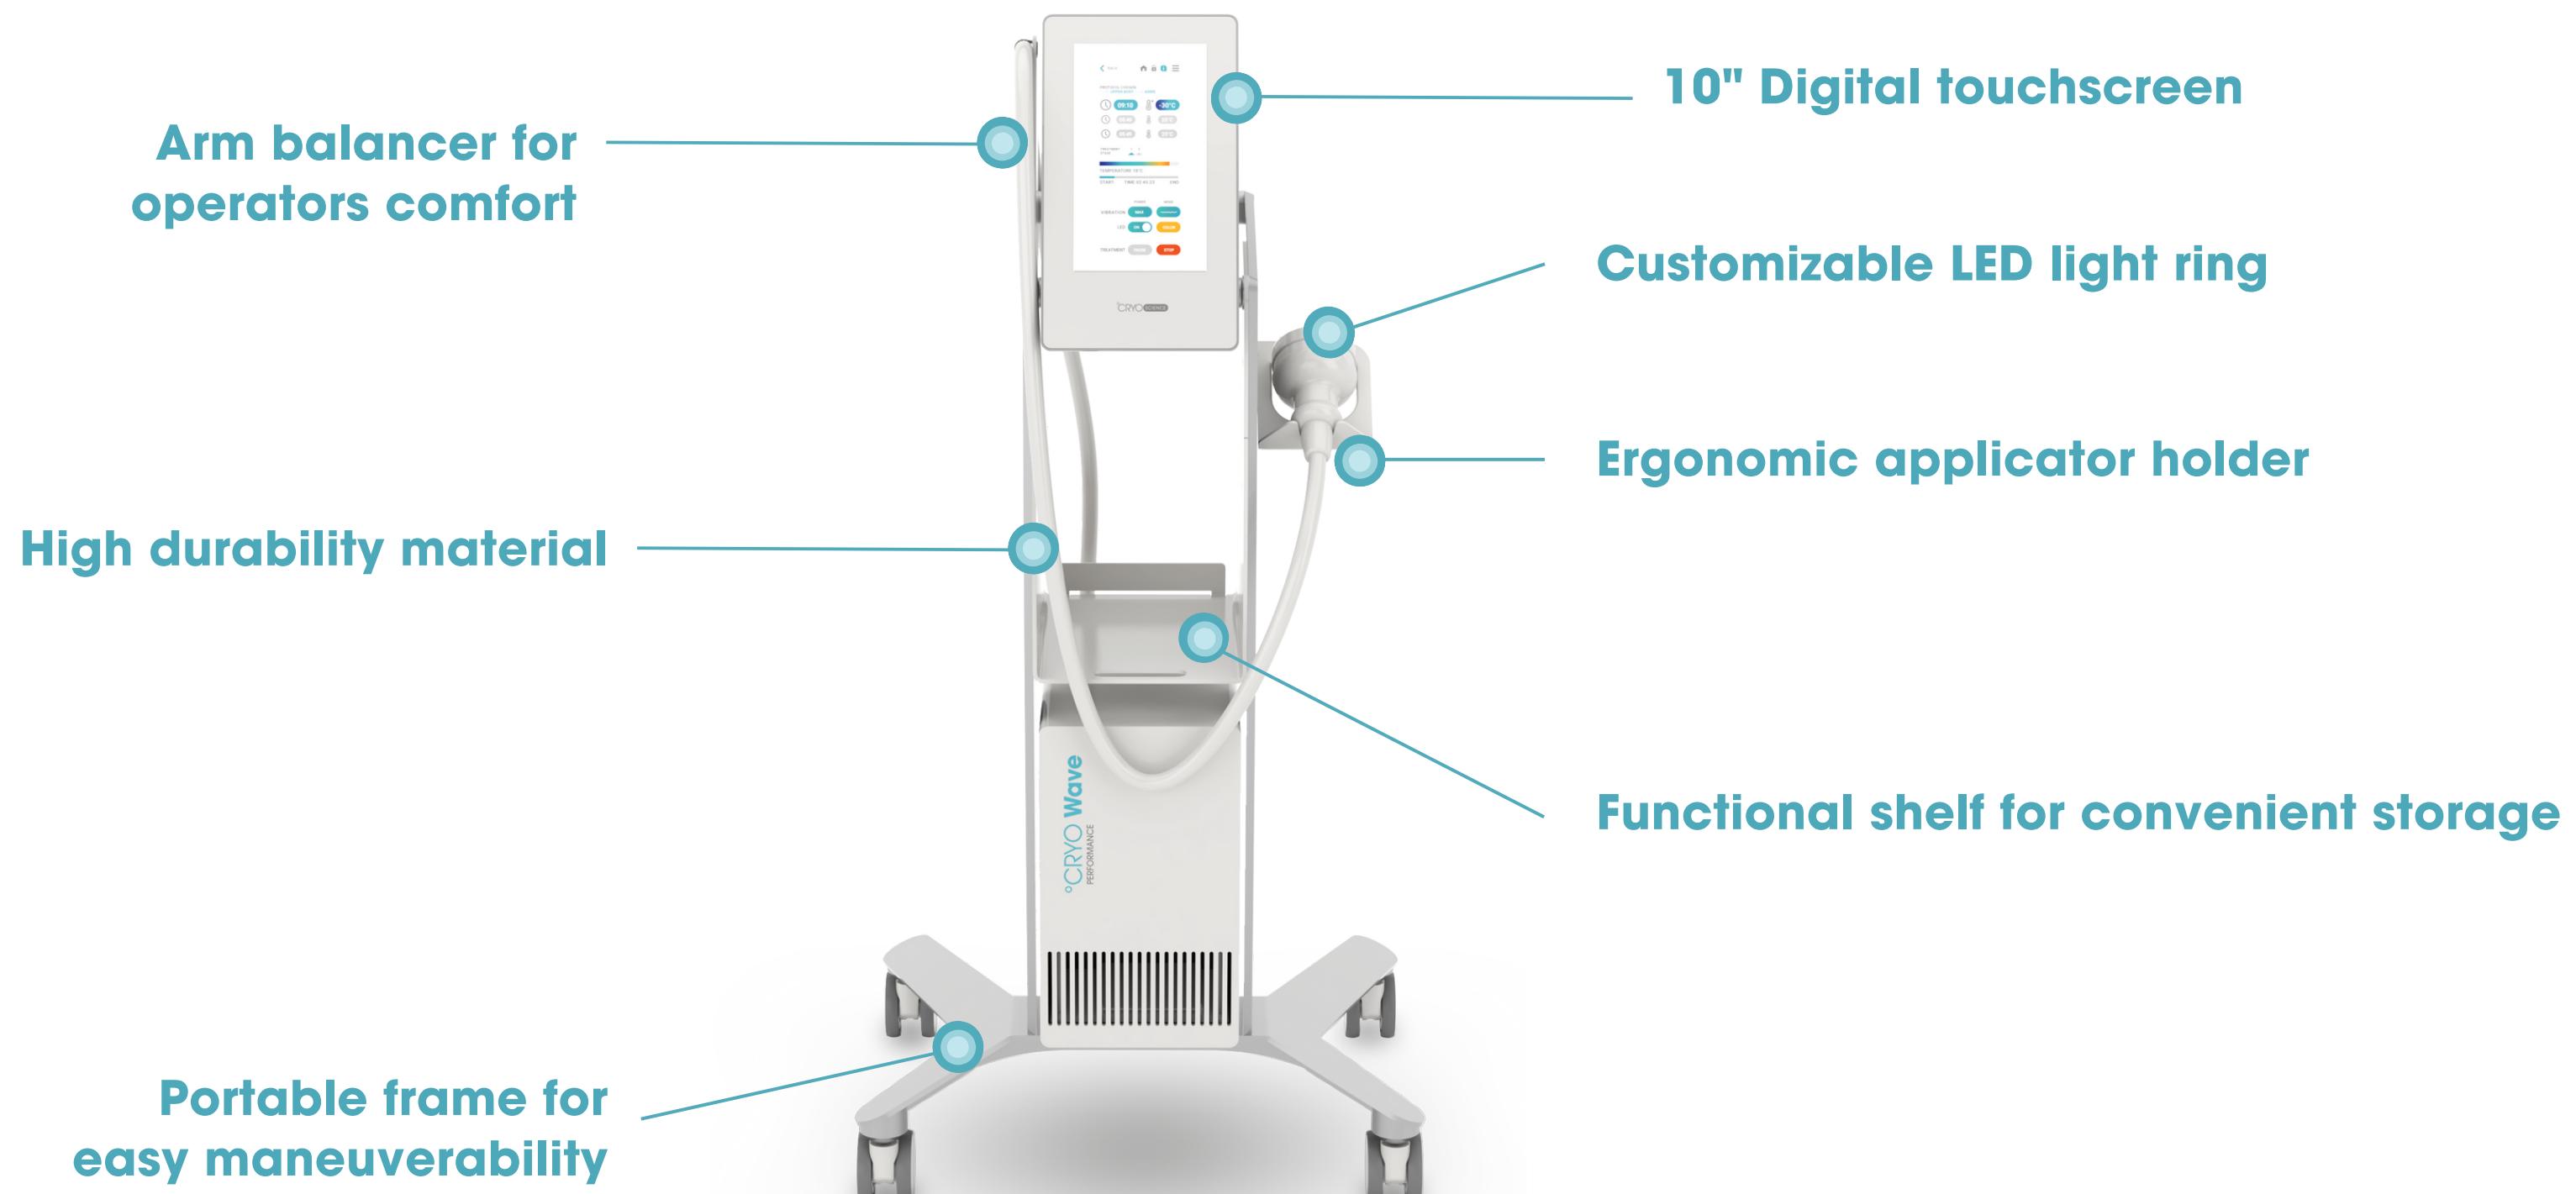

Best in class energy efficiency, durable, plug & play system

Customizable

Treatment protocols can be adjusted and saved to user preference

Product features

°CRYO Sculpting

| example of a treatment

Duration: 60-75 mins

Frequency: Every 2 weeks

Recommended treatment package: 8

A non-invasive procedure that safely delivers precisely controlled cooling to gently and effectively target the fat cells underneath the skin, providing instant results. Choose one/two target areas to focus on: love handles, belly, legs or arms.

A woman is lying down, receiving a facial cryotherapy treatment. A white, ribbed probe is held against her skin, emitting a bright blue light. The background is dark, and a white control panel is visible in the top right corner.

example of a treatment

| °CRYO Anti-Aging

Duration: 45 mins
Frequency: Every 2x weeks
Recommended treatment package: 6

A revolutionary facial treatment that improves your skin whilst boosting collagen and improving blood flow to reduce the appearance of fine lines and wrinkles. Your clients will notice visible results and changes in their skin instantly after the first session!

Extremely fast return on investment

120% ROI

For existing businesses within 1 year

180% ROI

For new businesses within 2 years

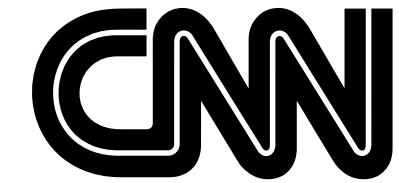

Dr. Fazeela Abbasi

Medical Doctor of Dermatology

"Cold shock triggers cold shock protein - the RMB3 protein - it regenerates and upgrades the synapse, the UCP1 gene gets activated, leading to mitochondrial biogenesis. Following things are happening at a cellular level. This cascade of chemicals has a strong anti-inflammatory effect and inflammation has been identified as a key driver of the aging process."
